LED 5000 SERIES

CONTINUOUS LED LIGHTING SYSTEM FOR COVES AND ARCHITECTURAL DETAILS

In order to truly harness the energy and maintenance savings benefits of LED, manufacturer's have been scrambling to identify applications that suit the type of output that LED is capable of.

As an accent light that brings out the intricacies of architectural detail, or softly illuminates cove and base board, LED can be a major asset not only for the lighting designer, but also to the site owner / manager who looks for cost-effective lighting while pursuing a 'green', or environmental approach for their home or business.

Dreamscape Lighting's 5000 Series and 5200 Series for wet location utilizes a continuous, dimmable LED light source that operates at only 2.5 watts per foot. Available in runs from 3" to 12 feet (on a single feed - longer lengths are available), the 5000 and 5200 series can be specified in a variety of color temperatures, as well as dramatic RGB.

5200 Series Key Specs:

Voltage:	24 volts AC/DC
Watts:	2.5 watts per foot
Lumens:	72 lumens per foot
Lamp Life:	50,000 hours
Color Temp:	2700K, 3100K, 6500K
RGB:	Yes
Dimmable:	Yes
Mounting:	Low heat allows for double stick tape or screws. Mounting clip channel provided.

Shown at actual size, the Dreamscape 5000 Series LED Light Strip is a diminutive vehicle for concealing the fixture, but not the lighting effect.
